## In the recommended setting 'self'

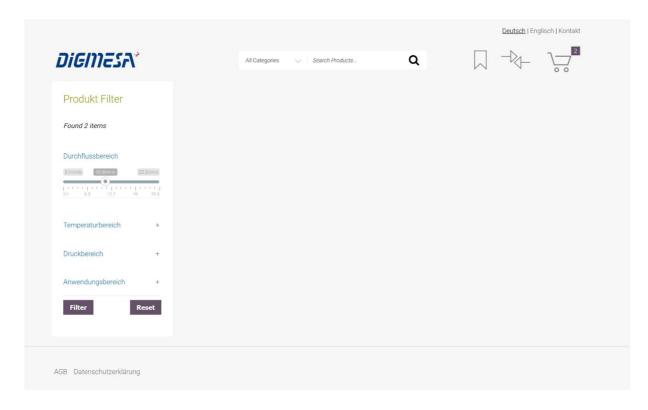

Output: Before filtering"

After filtering: The 'self' setting leads to a completely blank page.

Otherwise, with the default 'search' setting, no results are displayed when using the slider. The other filters work perfectly.

I noticed the issue in the MDTF plugin version 1.3.3.1.

Today, I downgraded the plugin to version 1.2.8 and found that the output with the slider is now correct. It appears that with the new version 1.3.3.1, the filter does not seem to work with this inside slider with the same settings.
