

Woocommerce Sidebar

MDTF

Title:

Meta Data Filter Category:

☐

Test MDTF

You can check more filter categories to enable changing of it on front!

Slug:

☐ Hide meta values filter options:

Hide meta values filter options necessarily if you are going to filter by taxonomies only!

☐ Hide taxonomies values filter options:

Results output page link:

Leave this field empty if you want to use the default value from settings. Use word [self] to redirect on the same page.

Results output template:

Leave this field empty if you want to use the default value from settings.

Custom reset link/url:

Leave this field empty if you want to use the default value from settings. Use word [self] to redirect on the same page.

Custom text for search results:

Example: Found %s items

☒ Show found items count text:**Meta options**☒ Show near checkbox count of posts:☒ Show count of posts in select option:☒ Show count of posts in range slider:☒ Dynamic post items recount:☐ Hide items where count of items is 0:☐ Show filter button after each block:**Taxonomies options**

Taxonomies for the selected slug:

☒ Produkt Temperaturbereiche (hidden):	Options
☒ Produkt Druck (hidden):	Options
☒ Produkt Anwendungsbereiche:	Options
☐ Produkt-Typ:	Options
☐ Sichtbarkeit des Produktes:	Options
☐ Produktkategorien:	Options
☐ Produkt Schlagwörter:	Options
☐ Produkt Versandklasse:	Options
☐ Produkt Druck [bar]:	Options
☐ Produkt Druckbereich:	Options
☐ Produkt Eigenschaften:	Options
☐ Produkt Flow Rate [l/min]:	Options
☐ Produkt Flow Rate [l/min] Maximal:	Options
☐ Produkt Flow Rate [l/min] Minimal:	Options
☐ Produkt Flowbereich:	Options
☐ Produkt Material:	Options
☐ Produkt Nozzle Size [mm]:	Options
☐ Produkt Temperaturbereiche:	Options
☐ Produkt Viskosität:	Options
☐ Produkt Zertifizierung:	Options

To show slugs taxonomies you have to add in selected Meta Data Filter Category a data constructor block of type "taxonomy". It must appear one time only in search form of one widget! Otherwise maybe problems.

- ☒ Show count of posts/custom:
- ☒ Dynamic post recount:
- ☐ Hide terms where count of items is 0:
- ☒ Show reset button:
- ☐ Auto submit form:
- ☐ AJAX items recount:
- ☐ AJAX items output:

Title for Any:

Any

Title for filter button:

Filter

Sort panel:

Additional taxonomies conditions:

Example: `product_cat=96,3^boutiques=77,88`. **Syntax is:**
`taxonomy_name=term_id,term_id,term_id ^ taxonomy_name2=term_id,term_id,term_id`
...

Meta Data Filter Options

Prepend Filter Item

Item Name:

Flowrate

Toggle

Item Type:

range slider

From^To

0.1^25.3

Slider step

0.1

Prefix

Example: \$

Postfix

l/min

Prettify

No

Search inside range

Yes

Enabling this mode allows you to set 2 values in post for range slider RANGE 'From' and 'To'. Not possible to reflect this. On the front range-slider is single! Doesn work with WooCommerce functionality.

This is woo price, and I want to set range from min price to max price from database

No

Item Description:

Item meta key:

medafi_5f65b18e6e99b

change meta key

Attention: meta key must be begin from medafi_ prefix, another way you will have problems! If you are using this key somewhere in code be ready to change it there! Change keys please for saved filter and filters items only, not for new and just created!

Reflect value from meta key:

☐ disabled

Example: _price, where _price is reflected meta field key in products of woocommerce. Reflection synchronizes data with already existing meta keys and makes them searchable!
